SynopsisDart and eDrilling announce partnership to provide solutions for real time drilling excellence

Houston, August 2, 2016 - eDrilling, a leading provider of drilling and well performance solutions, and SynopsisDart, a Drilling Optimization company that provides 24/7 monitoring and analysis of real-time drilling data for early detection and recognition of the symptoms of NPT/ILT and conditions adversely affecting ROP, today announced their partnership that will help E&P companies create significant value during drilling operations. Both eDrilling and Synopsis are committed through their partnership to help their upstream customers drill wells safer, quicker and cheaper.

SynopsisDART will provide experts to monitor remotely from their DART (*Data Analysis in Real Time*) Center their visualization, monitoring and data management solutions, along with eDrilling's state of the art real time software solutions.

"The advanced capability of eDrilling from its dynamic real time, interactive modeling technology complements the extensive drilling experience of SynopsisDART engineers thereby enhancing their ability to deliver quicker, reliable analysis and information for the decision maker" stated Gerry Galamay, Owner/Drilling Advisor of SynopsisDART

“eDrilling is confident that with this partnership with SynepsisDART, we are well positioned to provide our customers globally with the right support to better achieve their drilling and well performance goals,” said Rolv Rommetveit, CTO of eDrilling.

About SynepsisDART

SynepsisDART delivers 24/7 real time remote monitoring and analysis of drilling data and translating them into information needed in the decision making process. This involves data quality control and early detection of symptoms indicating potential drilling problems and adverse long term trends that contribute to sub-optimal drilling rates.
